Switch ramps with Assembly Set

Our switch ramps set consists of the actual switch ramp, the roll end or rolling control switch, and the suitable assembly set. The switches conform to the guidelines for safety switches and the two-part lever allows exact adjustment of the ramps. In our basic model, the rolling switches are enclosed ac-

ording to IP 40 protection. Upon request, the switches are available conforming to IP 54, 67, and as explosion-proof models. The solid switch ramps are available in the standard lengths of 2m, as well as in any desired custom length.

By using the included durable assembly set, the switch ramp and

switches can be installed quickly without problems in any desired position. Slotted holes and numerous alignment possibilities simplify the adjustment procedure.
